Footnotes
<ul style="list-style-type: none"> • Average rated life is measured at 3 hours per start on 2-lamp, rapid start magnetic ballasts per IES recommended practice. Lamp life on single-lamp rapid start ballasts may be reduced. • Approximate initial lumens after 100 hours operation. • The life ratings of fluorescent lamps are based on 3 hr. burning cycles under specified conditions and with ballast meeting ANSI specifications. If burning cycle is increased, there will be a corresponding increase in the average hours life. • Minimum starting temperature is a function of the ballast; consult the ballast manufacturer.
