CADET
SAFETY & QUALITY

SOFTHEAT
HYDRONIC ELECTRIC BASEBOARD HEATER

General Information:

Cadet's premier hydronic baseboard line is recommended for nurseries and bedrooms, and for people with severe allergies. While Softheat offers everyone a comfortably warm room, it was specifically designed to reduce the effects of indoor allergens, compared to other heating systems. Additional benefits include lower operating and surface temperatures and whisper quiet operation. The Softheat hydronic baseboard uses a circulating heat transfer fluid consisting of 80% water and 20% Ethylene Glycol to provide steady, uniform warmth with longer heat retention and minimal temperature variation. No plumbing necessary! Cadet recommends a wall-mounted thermostat for optimum performance, or you may prefer the convenience of an optional double pole field mount built-in thermostat kit (left end wiring only).

Features and Benefits

- Whisper quiet operation and low surface temperatures
- Maximum fluid capacity offers better heat retention and more consistent room temperatures with fewer on/off cycles
- Optional field-mount thermostat available

Technical Information:

Heater is constructed of 22 gauge steel for durability and powder coated for a quality finish. Baseboard heaters work best when placed under a window and at least 12" from furniture or other objects. Keep at least 12" minimum from objects hanging above (i.e., drapes). Heater may be placed directly on the floor and mounted to the wall (left end wiring only).

Ordering Information:

Standard voltage is 240 or 208. SOFTHEAT EBHA heaters require a thermostat. Optional White Sand color is available by special order.
